

Angular 5

Up and running a angular app is very simple and straight forward task using angular cli.

To work with Angular we need to install Node version 8.0.0 and above

To create Angular application and other angular units we need a command line tool called ng, which is also called angular cli.

To install angular CLI we must run

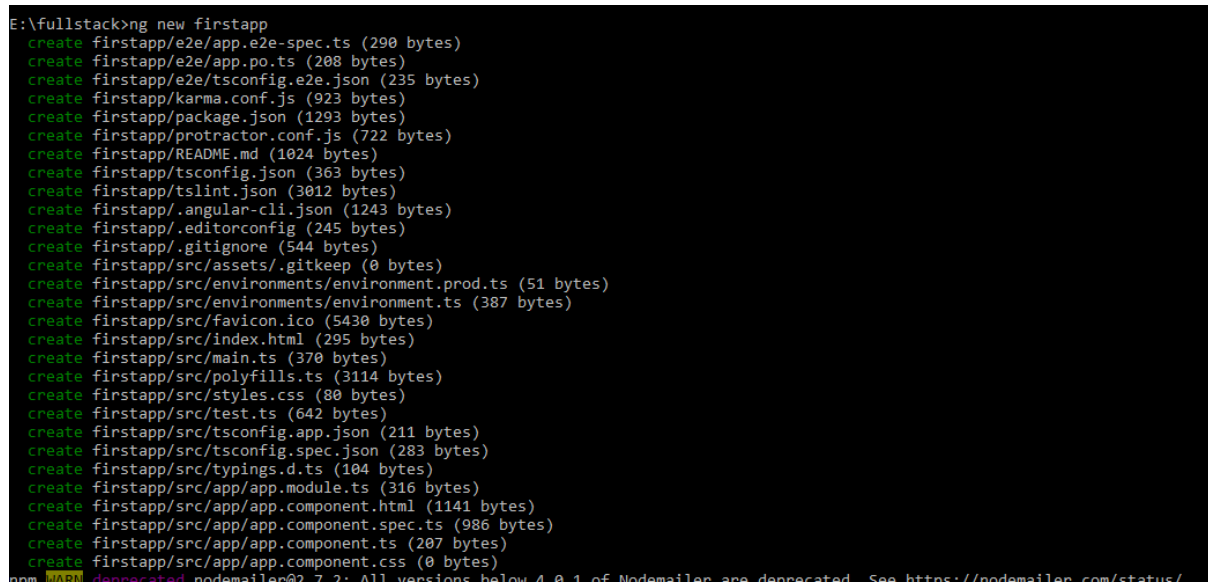

A screenshot of a Windows Command Prompt window. The title bar reads 'C:\> Command Prompt'. The window content shows the Microsoft Windows version (10.0.16299.371) and copyright information for 2017. The command 'C:\Users\VinodhKumar>npm install -g @angular/cli' has been entered at the prompt.

```
C:\> Command Prompt

C:\Users\VinodhKumar>npm install -g @angular/cli
```

To create a new angular application , we must run

A screenshot of a terminal window showing the output of the 'ng new firstapp' command. The output lists the creation of various files and their sizes. At the bottom, there is a warning message from npm regarding deprecated versions of Nodemailer.
